

Dental Suction Systems Market to Witness Rapid Growth Due to Rising Prevalence of Dental Illnesses By 2032

The global dental suction systems market size was USD 910.9 Billion in 2022 and is expected to register a rapid revenue CAGR of 4.9% during the forecast period.

NEW YORK, NY, UNITED STATES, April 23, 2023 /EINPresswire.com/ -- In 2022, the [Global Dental Suction Systems Market](#) Size was valued at USD 910.9 billion, and it is expected to grow at a

rapid revenue CAGR of 4.9% during the forecast period. The market growth is mainly driven by the increasing prevalence of dental illnesses, the popularity of aesthetic dentistry, the growing use of dental suction systems in offices and hospitals, and the availability of advanced dental suction systems.

The incidence of dental diseases such as periodontal disease, dental caries, and oral cancer is increasing globally, affecting around 3.5 billion people according to the World Health Organization. This has led to an increase in demand for dental procedures, resulting in the need for dental suction systems.

Moreover, the popularity of cosmetic dentistry has increased as people place more emphasis on their dental appearance. Dental suction systems are essential for removing saliva, blood, and other debris during cosmetic dental procedures such as tooth whitening, dental implants, and orthodontic treatments.

Hospitals and clinics also use dental suction systems for various dental treatments, and the increasing number of dental clinics and hospitals worldwide, coupled with the availability of technologically advanced dental suction devices, is driving market revenue growth. The latest dental suction devices are efficient, hygienic, and quiet, making them more appealing to dental workers.

Reports And Data

However, the high cost of dental suction devices and the significant maintenance and replacement costs associated with them may impede market revenue growth. Moreover, the lack of qualified personnel to operate these systems is another factor that could limit market growth, particularly in low-income countries.

Segments Covered in the Report

The dental suction systems market can be categorized based on various parameters. The market can be segmented based on product type, technology, application, and end-use outlook.

In terms of product type, the dental suction systems market can be classified as stationary and portable. Stationary dental suction systems are larger in size and are used in hospitals, while portable dental suction systems are smaller and can be used in clinics or even at home.

Based on technology, the dental suction systems market can be divided into wet suction and dry suction. Wet suction systems use water to collect debris, while dry suction systems use air.

The dental suction systems market can also be segmented based on application. The market can be divided into general, orthodontics, endodontics, and others. General dental suction systems are used in routine dental procedures, while orthodontic dental suction systems are used during orthodontic procedures. Endodontic dental suction systems are used during root canal procedures, and other dental suction systems are used during specialized dental procedures.

Lastly, based on the end-use outlook, the dental suction systems market can be segmented into hospitals, clinics, and ambulatory surgical centers (ASCs). Hospitals use dental suction systems for a variety of procedures, while clinics and ASCs use dental suction systems for routine dental procedures.
