Since selenium is a necessary trace element that is typically supplied via serum, sodium selenite is a frequent source of selenium in biological studies. The selenium analogue of cysteine, selenocysteine, is found in selenoproteins like glutathione peroxidase and thioredoxin reductase. In vivo detoxification is facilitated, in part, by glutathione peroxidase, a peroxide scavenger.

Many media additives used in cell culture contain sodium selenite. In studies on cancer and cell growth, sodium selenite has been employed. It has been applied to alter cDNA microarray-measured gene expression in HepG2 cells.
