The Steinberg Law Group has decades of experience in handling mesothelioma and other asbestos-related cases. With offices in New York, California and Texas, the Steinberg Law Group has a national footprint that helps win the best possible financial compensation for clients. www.mesotheliomaoptions.com

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago. www.mesotheliomaoptions.com

New Mexico is home to many companies that are known for asbestos-containing products. In addition, New Mexico contains eleven known naturally-occurring asbestos deposits, with the southwestern region being the most potentially toxic. New Mexico also received over 50,000 pounds of raw asbestos from the notorious mines in Libby, Montana. Exposure to asbestos may have occurred in popular New Mexico industries such as energy production, manufacturing and mining. As a result, professional asbestos-abatement specialists should be consulted prior to beginning any demolition or construction within New Mexico. www.mesotheliomaoptions.com

Known jobsites, companies and locations with asbestos exposure in New Mexico include, but are not limited to, Delta-Person Generating Station, Four Corners Power Plant, Kerr McGee Potasa Mine, Alamogordo Lambert Company, Albuquerque Air Route Traffic Control Center, Albuquerque Federal Building, M.R.
