Definition:

Decentralized Finance, or DeFi, is a financial system built on blockchain technology that enables peer-to-peer transactions without the need for intermediaries such as banks or other financial institutions. DeFi aims to create a more transparent, open, and accessible financial system by using decentralized technologies and smart contracts. In DeFi, financial transactions are executed on a decentralized network, typically on the Ethereum blockchain, using digital currencies or tokens that are programmable and can be traded, exchanged, or used as collateral. DeFi protocols enable users to earn interest on their digital assets, lend or borrow digital assets, trade cryptocurrencies, and engage in other financial activities. DeFi represents an exciting innovation in the financial industry that has the potential to create a more open, accessible, and decentralized financial system in the future.

Revenue and Sales Estimation — Historical Revenue and sales volume are presented and further data is triangulated with top-down and bottom-up approaches to forecast complete market size and to estimate forecast numbers for key regions covered in the report along with classified and well-recognized Types and end-use industry.

SWOT Analysis on Decentralized Finance (DeFi) Players

In addition to Market Share analysis of players, in-depth profiling, product/service, and business overview, the study also concentrates on BCG matrix, heat map analysis, FPNV positioning along with SWOT analysis to better correlate market competitiveness.
