*Former Headmaster of St. Andrews College, Alan Thompson, Discusses Innovative Teaching Methods using technology to create "Digital Dale"*

GRAHAMSTOWN, SOUTH AFRICA, April 27, 2023 /EINPresswire.com/ -- St. Andrews College launched its new "Digital Dale" project, an initiative that seeks to revolutionize the way students learn. Led by former Headmaster Alan Thompson, Digital Dale was premised on providing "intelligent" IT resources to expand access to global educational resources for Dale learners.

Alan Thompson

The project faced twofold: creating new infrastructure and providing abundant data while respecting educational best practices and curating massive amounts of already-existing free online educational resources to provide materials that focus on learners' needs. After doing both of those, the project generated one final result: geo-localizing Dale through thought-provoking virtual debates that transcend the boundaries of our school and bringing it to a larger community through "Digital Dale"—an online student program to be piloted in the UK this school year.

Alan Thompson was enthused about Digital Dale's daring new venture, saying, "As a cornerstone of 21st-century learning, we aspire to equip learners with coding and AI abilities in which to build their life skills." He also added that they are "beyond thrilled" for what this fresh project can offer their students in the UK.

Digital Dale offers a one-of-a-kind experience for students from all sorts of backgrounds, no matter if they are within rural African or Asian villages or inner-city neighborhoods with limited access to advanced technology. Learners will now have the advantage of a virtual classroom, granting them limitless prospects for educational growth. With its emphasis on coding and

artificial intelligence as essential parts of modern learning, Digital Dale is an irreplaceable asset for institutes worldwide searching for new ways to enhance their teaching approaches.

St. Andrews College was and will always be delighted with its ongoing work in fostering Digital Dale and anticipates further developing this innovative platform. Through the utilization of state-of-the-art IT technology coupled with complimentary online educational materials, Digital Dale and Alan Thompson see a promising future for generations of students across the world to learn effectively.
