

Moviestorm launch FirstStage, the pioneering VR-based content creation platform

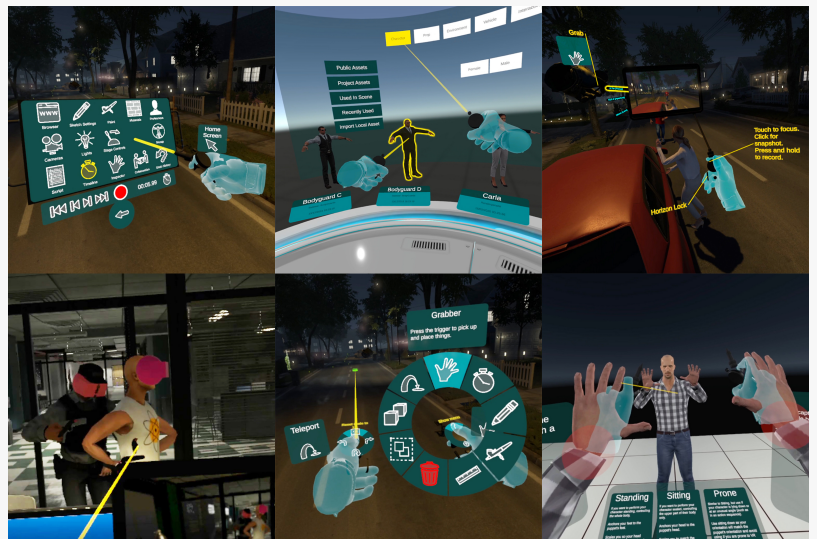

FirstStage is based upon research to enable production teams to take full creative control of pre production planning, or the creation of immersive experiences.

CAMBRIDGE, CAMBRIDGESHIRE, UNITED KINGDOM, May 2, 2023 /EINPresswire.com/ -- After 3.5 years of expert European research and 3.5 years of product development, FirstStage is now out of beta and available as a general release directly from the Moviestorm website.

This pioneering new content creation platform has been developed to enable creatives and subject experts to take full control of their creative process by providing an intuitive VR-based 'natural user interface' toolset.

FirstStage supports a variety of production needs, from fast iterative exploration and testing of production ideas, whether for film, TV, theatre or games, through to the low cost delivery of finished player apps for immersive learning and VR experiences.

With real-time remote collaboration, users can jump onto a virtual stage from anywhere and work productively, in their roles as a team, and

Natural user interface examples

communicate ideas and solutions to others as images, video, or a VR experience.

FirstStage works with a standard VR setup connected to a gaming PC, and with a free trial and a personal licence available for just \$10 per month provides an affordable and accessible creative solution.

“Literally the future of pre-production.”

Beta collaborator (Dr Evil Superbowl Advert) Greg Jordan, Bootleg Games

“FirstStage delivers a truly flexible creative environment.”

Beta collaborator (Music Video for the Metaverse) Pete Kirtley, Soundr

“You really are not prepared for how real working in VR is... with free movement and the ability to work productively with your team, you can suddenly see a whole host of opportunities and benefits.”

Beta collaborator (Beneath) Gene Fallaize, Cupsogue Pictures
