The [aircraft lighting system industry](#) holds a great potential in the future, owing to the rise in the global aviation industry and increase in air traffic in developed and developing regions. Arrival of LED lights having a long lifespan, low maintenance, and increased operational efficiency has disrupted business dynamics. Initiatives taken by aircraft lighting system manufacturers to offer custom interior lighting arrangements as per client requirements is expected to drive market competitiveness. In addition, innovative lighting ideas to improve inflight experience of passengers is expected to drive new business opportunities in the coming years.

In addition, the aircraft lighting system market is highly regulated by various government bodies and regulatory organizations across the globe. Industry players operating within the market enjoy freedom in designing and integrating the interior arrangement of aircraft lighting, string regulations need to be followed by integration of exterior aircraft lighting systems. Regular A, B, C, and D checks of an aircraft during MRO with a substantial focus on effective operations of aircraft lighting is also one of the major factors that drive the market growth.

By position, the market is categorized into interior lighting and exterior lighting. Interior lighting

is expected to witness a lucrative growth rate over the coming years. The platform market segment encompasses commercial aircraft, general aviation, private aircraft, and freighter aircraft. The commercial aircraft segment is expected to witness highest market share in the coming years, whereas the general aviation and private aircraft segment is expected to witness highest growth rate, owing to rise in custom interior lighting of private aircraft owners. By lighting type, the LED segment is expected to witness highest growth rate during the forecast period.
