A thyroid function test is a medical test used to assess the function of the thyroid gland. The thyroid gland is a small, butterfly-shaped gland located in the neck that produces hormones that regulate the body's metabolism.

The most common thyroid function test is the thyroid-stimulating hormone (TSH) test. TSH is a hormone produced by the pituitary gland in the brain that stimulates the thyroid gland to produce thyroid hormones. In a TSH test, a healthcare provider measures the amount of TSH in the blood. If TSH levels are high, it may indicate an underactive thyroid gland (hypothyroidism), while low levels may indicate an overactive thyroid gland (hyperthyroidism).
