#### Definition:

Multi-cloud storage refers to the practice of using multiple cloud storage providers to store and manage data. Rather than relying on a single cloud storage provider, businesses can choose to use multiple providers to diversify their storage options and reduce their reliance on any one provider. However, managing multiple cloud storage providers can also be challenging, requiring businesses to ensure that data is properly organized, managed, and secured across all providers. Effective multi-cloud storage requires careful planning and coordination to ensure that data is accessible and secure across all providers.
