The Instant Noodles industry was valued at \$47.6 billion in 2021, and is estimated to reach \$92.7 billion by 2031, growing at a CAGR of 6.9% from 2022 to 2031.

PORTLAND, OREGON, UNITED STATES,

May 11, 2023 /EINPresswire.com/ --

[Instant noodles](#) are convenient ready-to-cook dishes. Instant noodles were created in Japan and typically consist of dry noodle blocks with various sorts of flavored spices, sauces, or mixes of both depending on the brand of noodles. Instant noodles, often known

as instant ramen, provide consumers the convenience of quick noodle cooking and consumption without any prior preparation required. Instant noodles are particularly popular in Asia-Pacific, but they are also popular across the rest of the world. Depending on the location where the noodles are marketed, involved stakeholders develop various flavor offerings to better fit the region's taste palates.

Hectic work schedules of millennial and Gen Z generations along with rise in demand for ready to eat products is driving the growth of the instant noodles market. Hence, busy lifestyle being adopted by majority of consumers paves way for instant noodles product to grow in terms of volume sales. Furthermore, rise in clean label focuses on avoidance of additives, artificial colors, chemicals, artificial flavors, GMO's, high fructose corn syrup, and hydrogenated oil which has further augmented the growth of the market. However, the rise in the consumption of instant noodles products has simultaneously led to an increase in the influx of fake and counterfeit products in the market. Moreover, counterfeiting refers to fake branding and sale of non-authorized products and signifies a great challenge for the real vendors of instant noodles products.

Counterfeit brands are usually prevalent in the developing economies where customers are highly price-sensitive. These brands are of low quality and often lead to inconvenience & safety issues that subsequently develop negative perceptions among customers. Online distribution channel is one of the major platforms where transaction of counterfeited brands can be easily concealed. Thus, development of the counterfeit industry is anticipated to hamper the sale of the existing original instant noodles brands in the market.

KEY FINDINGS OF STUDY

- By product type, the instant noodles market is divided into vegetable, chicken, sea-food, and others. The chicken segment constitutes a major instant noodles market share; however, the sea-food segment is projected to experience growth at the highest CAGR during the forecast period.
- Depending on packaging, the market is divided into packets and cups. The cup segment accounted for highest market share in 2021, and is expected to grow at a significant CAGR during the forecast period. The cups instant noodles help in enhancing the shelf life of product as well as prevents the taste and flavor of noodles from getting spoil. In addition, cup packaging is more safer during transportation and storage.
- According to source, the Instant Noodles Market Size is divided into oats, wheat, rice, and others. The wheat segment dominated the market; however, the rice segment is projected to experience growth at the highest CAGR during the forecast period.
- As per distribution channel, the market is divided into hypermarket/supermarket, convenience

stores, specialty stores, online sales channel, and others. The hypermarket/supermarket accounted for highest market share in 2021, and is expected to grow at a significant CAGR during the forecast period.
