Definition:

Pharmaceutical gelatin or gelatine is a translucent, colorless, flavorless, and delicate substance with a high molecular weight. Pharmaceutical gelatin is used in pharmaceutical industries owing to its absorbable nature. Pharmaceutical gelatin is used to maintain the stability of pharmaceutical suspensions and serves as a substitute for plasma. It is commonly used as a gelling agent in medications, drugs, and vitamin capsules.

Market Trends:

- Gelatin and collagen peptides are important components of immunity and wellness products, which are in high demand both domestically and abroad. This increase was brought on by this trend

Market Drivers:

- Fish gelatin, whether firm or soft, can form films, which makes it useful in the pharmaceutical sector for making capsules that are widely consumed due to its capacity to bind the unpleasant tastes and smells of medications

Market Opportunities:

- Emerging Economies to Provide High-Growth Opportunities
