Emergen Research. Steady increase in demand for attractive interior designs along with development of in-flight entertainment systems is a key factor driving market revenue growth. Rising competition among domestic and international airline carriers and need to comply with various standards, drive brand value, and offer more enhanced flight experience are some key factors resulting in refurbishing of aircraft and installation of more attractive interior design.

Increasing focus on more advanced and efficient and enhanced travelling experience has been resulting in opening up of new and more lucrative revenue opportunities for players in the aircraft refurbishing

industry. Interiors, including cabins and cockpits, are restructured and redesigned during refurbishment, and these processes provide additional benefits, including reduced operational costs and improved end-user travel experience. Aircraft refurbishing service providers continue to explore more efficient and cost-effective, and visually appealing ways of refurbishing aircraft. In addition, consumer electronics are also integrated and repackaged as in-flight entertainment system components. Because these electronic components have a limited lifespan, aircraft refurbishment plays a crucial role in keeping these components ahead of the competition and avoid obsolescence. Furthermore, because these technologies are rapidly becoming obsolete, key players have the opportunity to design, manufacture, and install customized in-flight entertainment systems while keeping up with new technological innovations. This factor is expected to create favorable business opportunities for market players in the near future.

In terms of features, functions, and applications, aircraft cabins have innovated significantly over the years with the help of refurbishing. Growing trend of brand endorsement and cabin branding and rising focus on offering additional value and features, services, ambience, and comfort to passengers are expected to support market growth.
