

Global Sonochemical Coatings Market Is Projected To Grow At A 12% Rate Through The Forecast Period

The Business Research Company's Sonochemical Coatings Global Market Report 2023 – Market Size, Trends, And Market Forecast 2023-2032

LONDON, GREATER LONDON, UK, May 12, 2023 /EINPresswire.com/ -- The Business Research Company's "Sonochemical Coatings Global Market Report 2023" is a comprehensive

source of information that covers sonochemical coatings market analysis and every facet of the market. As per TBRC's sonochemical coatings market forecast, the sonochemical coatings market size is predicted to reach a value of \$3.40 billion by 2027, rising at a significant annual growth rate of 12.6% through the forecast period.

The Business Research Company's global market reports are now updated with the latest market sizing information for the year 2023 and forecasted to 2032"

> The Business Research Company

The rising consumer demand for electronic products is expected to boost the sonochemical coatings market demand going forward. North America is expected to hold the largest sonochemical coatings market share. Major players in the Sonochemical Coatings market include Sono-Tek Corporation, Ultrasonic Systems Inc., MTI Corporation, Siansonic Technology Co. Ltd., Sonaer Inc., Noanix Corporation, Nadetech Innovations, Optosense LLC.

Sonochemical Coatings Market Segments

1) By Type: Zinc Oxide (ZnO), Silver-Titanium Dioxide (Ag-

TiO2), Prussian Blue Nanoparticles (PB-NPs), Silicon Dioxide (SiO2), Copper Oxide (CuO), Other Types

- 2) By Technology: Solvent-based, Water-based
- 3) By Substrate: Cotton, Polyester, Plastic sonochemical coatings, Glass, Other Substrates
- 4) By End-use: Medical, Consumer Electronics, Building And Construction, Automotive, Plastic, Textile, Other End Users

These types of coatings are thin films or layers that are applied to the surface of a material using sonochemistry. The use of high-frequency sound waves, or ultrasound is used to facilitate chemical processes that culminate in the production of a coating. The waves produce high-energy microbubbles in a liquid solution, which can then be utilised to break down and change a material's surface.
