Diagnostic catheters are medical devices used in diagnostic procedures to assess and visualize the inside of various parts of the body, such as blood vessels, chambers of the heart, or other hollow structures. These catheters are typically long, thin, flexible tubes made of biocompatible materials such as plastic or silicone.

Diagnostic catheters are inserted into the body through a small incision or a natural body opening, such as a blood vessel, and are guided to the target area of interest. They often have a hollow lumen or channels through which various instruments, fluids, or contrast agents can be

passed for diagnostic purposes.
