

Intraoperative Radiation Therapy Market : Moving Towards a Brighter Future | Current Trends and Future Scenarios

PORTLAND, OR, UNITED STATES, May 29, 2023 /EINPresswire.com/ -- The [Intraoperative radiation therapy \(IORT\) market](#) refers to the market for devices and services used to deliver radiation therapy to cancer patients during surgery. IORT is a type of radiation therapy that delivers a high dose of radiation directly to a tumor site during surgery, while sparing surrounding healthy tissue. This can help to reduce the risk of cancer recurrence and improve patient outcomes.

The market for IORT is driven by the increasing incidence of cancer worldwide, as well as the growing demand for more targeted and personalized cancer treatments. The use of IORT in cancer treatment has become increasingly popular, as it offers a number of advantages over traditional radiation therapy methods, including reduced treatment time, fewer side effects, and improved quality of life for patients.

According to the "Intraoperative Radiation Therapy Market: Global Opportunity Analysis and Industry Forecast, 20120-2027", report published by the Allied Market Research, the study presents impending revenue forecast of the industry for the next few years coupled with imminent market trends and opportunities. Moreover, the study also doles out different logical tables and graphs to identify the complexities of the market.

The growth in the rate of the lethality of the coronavirus-2 disease has brought up a global concern for the safety of the global population enforcing the lockout situation. The surge in the demand for the recovery of the patients who are exposed to the virus would need respiratory equipment for better treatment. There is a surge in the usage of these devices globally and hence the manufacturers are taking advantage and hence gaining maximum shares. However, the surgical procedures are now brought to a halt which will lead to the downfall of the other medical devices and supplies. This has also led to a decrease in the growth of the Intraoperative Radiation Therapy in the current situation. Furthermore, the use of the equipment which can be used to prevent the exposure with the COVID-19 is anticipated to increase in the near future. The rise in the government interference towards the safety of the global population would help the use of the personal protective equipment in the commenced period.
