

Irritable Bowel Syndrome Treatment Market to Experience Remarkable Growth, Surpassing \$2 Billion by 2026

PORTLAND, OREGON, UNITED STATES, May 29, 2023 /EINPresswire.com/ -- The market for treating [irritable bowel syndrome](#) (IBS) has witnessed significant growth in recent years. In 2018, the estimated value of the IBS treatment market was \$1,071 million. However, with increasing awareness and advancements in medical research, the market is projected to reach a staggering \$2,012 million by 2026. This represents a remarkable compound annual growth rate (CAGR) of 8.2% during the forecast period from 2019 to 2026.

Irritable bowel syndrome (IBS) is indeed a common gastrointestinal disorder characterized by various signs and symptoms that primarily affect the large intestine. These symptoms often include abdominal pain, bloating, gas, cramping, and can alternate between constipation and diarrhea. The condition is typically classified into three main types: IBS with diarrhea (IBS-D), IBS with constipation (IBS-C), and mixed IBS, where symptoms of both constipation and diarrhea are present.

IBS is a chronic condition that affects the large intestine. It is characterized by a variety of symptoms, including abdominal pain, bloating, gas, and changes in bowel habits. The condition is typically diagnosed based on a combination of symptoms and a physical examination. There is no cure for IBS, but there are several treatments available to help manage the symptoms. These include dietary changes, stress management, and medication. The report provides a comprehensive overview of the IBS treatment market, including the current market size, growth prospects, and the competitive landscape.

1. **Types of IBS:** The report recognizes and categorizes IBS into different types based on symptoms:
 - a. **IBS with Diarrhea (IBS-D):** This type is characterized by frequent episodes of diarrhea.
 - b. **IBS with Constipation (IBS-C):** This type involves predominantly constipation symptoms.
 - c. **Mixed-presentation IBS (IBS-M):** This type encompasses a combination of both diarrhea and constipation symptoms.
2. **Product Analysis:** The report focuses on the analysis of specific products used for IBS treatment. Some of the prominent products covered include:
 - a. **Rifaximin:** This medication is commonly prescribed to regulate bowel movements in IBS-D.
 - b. **Eluxadoline:** It is another medication used to manage symptoms associated with IBS-D.
 - c. **Lubiprostone:** This medication is employed for the treatment of IBS-C, aiding in relieving constipation.
 - d. **Linaclotide:** It is a medication primarily prescribed for IBS-C, helping to alleviate constipation and reduce abdominal pain.
 - e. **Others:** The report acknowledges that there are additional products available in the market that may be used for IBS treatment, but they are not specified in detail.

3. End User Segmentation: The report identifies different end users of IBS treatment: a. Hospitals Pharmacies: These are pharmacy facilities within hospitals that provide medications and treatments for IBS patients. b. Drug Stores & Retail Pharmacies: These include traditional brick-and-mortar pharmacies where IBS medications can be purchased. c. Online Pharmacies: The report highlights the significance of online platforms that offer IBS medications, providing convenience and accessibility to patients.
