Sustainable footwear is a type of footwear which is made by recycling waste and are manufactured by eco-friendly production process. In addition to this, surge in youth population, improved lifestyle, and rise in disposable income of individuals in developing countries are anticipated to offer immense opportunities for sustainable footwear market players during the forecast period. Nowadays, sustainable footwear is gaining popularity among the environment conscious consumers which in turn has propel the demand for sustainable footwear from the consumers contributing in driving the sustainable footwear market growth in terms of value sales.

Furthermore, by distribution channel, the online store segment is anticipated to be the fastest growing segment, in terms of value sales during the forecast period. This is attributed to the fact that e-commerce is becoming a popular medium for purchase of footwear including sustainable footwear among customers. This is attributed to easy availability of sustainable footwear and benefits provided by these stores such as information about product functional attribute, time-saving features, and facility of home delivery to customers.
