

Construction Worker Safety Market Analysis, Trends, Forecast 2032 | Hits CAGR of 10.1% Says AMR

Construction Worker Safety Market Expected to Reach \$7.8 Billion by 2032

PORTLAND, OR, UNITED STATES, May 30, 2023 /EINPresswire.com/ -- The [construction worker safety market](#) size was valued at \$3 billion in 2022, and is estimated to reach \$7.8 billion by 2032, growing at a CAGR of 10.1% from 2023 to 2032.

Construction worker safety equipment include harnesses, PPE (personal protective equipment), and other equipment specifically created to safeguard employees from a variety of hazards at the construction site. An increase in spending on employee safety is anticipated to help leading players in the global construction worker safety market create growth prospects in forthcoming years. In addition, major industry players use acquisition strategy to grow their businesses.

Moreover, construction worker safety has risen to the top of the priority list as companies recognize that taking a proactive approach to injury prevention and treatment indicates a commitment to their employees' well-being. A significant shift toward a more all-encompassing approach to well-being beyond physical health is being observed within the sector as a result of the National Institute for Occupational Health's (NIOSH) implementation of the Total Worker Health concept. Working at height, machine operating, noise and other such a dangerous work environment at construction sites create demand for products in the construction worker safety market.

In addition, the outbreak of COVID-19 has led to a halt in logistic and manufacturing activities across the globe, which, in turn, has led to the interruption of the supply chain, thereby hindering the growth of the construction worker safety market. However, this situation is

expected to improve as the government has relaxed norms around the world for resuming business activities.
