Clinical perinatal software refers to specialized computer programs and applications designed to support healthcare professionals in the management and care of pregnant women and their newborns during the perinatal period, which includes pregnancy, childbirth, and the postpartum period. This software is specifically developed to assist in monitoring, documenting, and analyzing various clinical data and processes related to maternal and fetal health, ensuring comprehensive and personalized care for both mother and baby.

Clinical perinatal software typically encompasses a range of functionalities, including electronic health record (EHR) systems tailored for obstetrics and gynecology, fetal monitoring systems, decision support tools, and data analytics capabilities. It allows healthcare providers to maintain accurate and up-to-date records of patients' medical histories, prenatal care visits, laboratory results, ultrasound images, and other relevant data. The software often includes modules for monitoring fetal well-being, tracking maternal vitals, managing medications, documenting labor progression, and facilitating communication and collaboration among the healthcare team.
