

Weather-Resistant Woodgrain Alternatives For Patios & Outdoor Structures

Interstate Advanced Materials offers TimberLine™ HDPE sheet in new solid color woodgrain variations to provide design choices for outdoor applications.

SACRAMENTO, CA, UNITED STATES, June 15, 2023 /EINPresswire.com/ -- When building walls, cabinetry, patios, furniture, and outdoor kitchens, the look of authentic wood is difficult to match. However, wood used in outdoor applications rots, deforms, splinters, and swells over time. Interstate Advanced Materials offers [TimberLine™ HDPE sheet in new woodgrain variations](#) that allow outdoor applications to have the timeless look of wood without its weaknesses.

Unlike wood, TimberLine™ sheets will not absorb moisture and will not splinter, crack, rot, peel, warp, or deform from repeated exposure to water.

TimberLine™ HDPE features an embossed woodgrain design that mimics the appearance of wood. It has superior scratch resistance and impact resistance compared to wood and has excellent weatherability. TimberLine™ sheets will not absorb moisture and will not splinter, crack, rot, peel, warp, or deform from repeated exposure to water and the elements, allowing it to outlast wood in patios, furnishings, and other outdoor applications. UV-stabilized TimberLine™ HDPE sheet will not fade or yellow from exposure to the sun, ensuring that structures retain their vibrancy over time. It may be fabricated using standard woodworking tools, and unlike wood can be thermoformed, opening up new design options that wood cannot replicate. Like [standard HDPE](#), TimberLine™ sheets feature resistance to chemicals, allowing for easier and lower maintenance than wood.

TimberLine™ HDPE is used in outdoor patio and structure applications such as furniture, kitchens, cabinetry, and landscape architecture. Its durability and weatherability make it suitable for more than just outdoor residential applications. TimberLine™ sheets have replaced wood in boat part replacement, marina architecture, playground areas, and even in some parts of building construction.

TimberLine™ HDPE features an embossed woodgrain design that mimics the appearance of wood. It has superior scratch resistance and impact resistance compared to wood and has excellent weatherability.”
