surgery, and pathology of male reproductive organs and gametes, but will also write about common conditions such as urinary tract infections, kidney stones, bladder control problems, and prostate problems.

Dr. Patel explains that “in today's busy urology practices, medical doctors and their staff rarely have the time to answer all questions that the patients have. The patients often start searching on the internet. However, one should not act based solely on information found on the internet, but instead review the issues with the medical doctor who has the patient's medical history and has personally examined the patient. Also, when patients research online,

they find highly complex answers that are very difficult to understand for a layperson, or even contradictory information. I hope to fill that information gap with explanatory articles that anybody can understand.”

For example, many people hear and talk about “infertility” and the difficult path to conceiving. Explains Dr. Patel, "Infertility in men can have many different causes, for example low sperm production, abnormal sperm function or blockages that prevent the delivery of sperm. Conditions such as illnesses, injuries, chronic health problems, lifestyle choices and others may factor in and contribute to male infertility. However, male infertility is not necessarily permanent. Whether it can be treated depends on the underlying cause."

However, Dr. Patel cautions patients to review medical issues with their medical doctor and not to act on information they find randomly on the internet. His blog is available at <https://ZamipPatel-MD.com/> Dr. Patel will also offer explanatory videos on his [YouTube](https://www.youtube.com/@Dr.ZamipPatel) Channel, <https://www.youtube.com/@Dr.ZamipPatel>
