Citrus fiber is made up of insoluble and soluble fiber components found in citrus fruits including oranges, lemons, and limes. It is a type of dietary fiber formed from the indigestible component of citrus fruits that generally goes through the human digestive system without being

broken down or digested. These dietary fibers cannot be digested by human digestive system.

This fiber helps in smooth bowel movement. There are numerous health benefits associated with consumption of citrus fibers that plays as an important factor in driving the global citrus fiber market growth. These fibers help to prevent certain diseases such as irritable bowel syndrome (IBS), heart disease, type 2 diabetes, high cholesterol levels, high blood sugar levels, and obesity.

Growth in use of citrus fibers in various industries such as bakery, sauces & seasonings, desserts, ice creams, beverages, flavorings, and coatings, exponentially propels the growth of the citrus fiber market across the globe. Disease preventing properties of citrus fibers is paving way for its increasing use in daily meals of health oriented consumers. Citrus fibers are also used in pet foods. It has a high water holding capacity and emulsification capabilities, both of which are important in the production of high-quality pet food and treats including kibble, biscuits, and injection-molded bones.

The outbreak of the COVID-19 disease in 2020 hampered the dietary fibers market. Governments imposed strict lockdowns and bans on travel rules to curb spread of the virus. Manufacturing facilities were either partially or completely shut down and the citrus fibers industry faced shortage of labor.

Furthermore, supply lines were affected as a result of travel restrictions. The citrus fibers industry, across the other side, acquired some traction following the relaxation of lockout limitations, and demand is likely to expand substantially in the future years. This is attributed to the fact that fiber-based food can help in fighting the COVID-19 virus as it is highly effective in building and boosting immunity.
