Urban air mobility is now proving to be a practical means of transport for moving people and cargo in innovative, cost-efficient ways. Urban air mobility guarantees to improve the current transportation ecosystem from congested roads and traffic conjunction. Urban air mobility has the potential to boost the effectiveness of the current transportation systems by minimizing distance traveled and enhancing sustainability. Urban air mobility will be thoroughly incorporated using the existing infrastructure and networks for transportation for connections at the first and last miles. The development of eVTOL aircraft which are able to take vertical takeoff has gotten the attention of major market players in urban transportation, which is a major factor estimated to propel the urban air mobility(UAM) market demand in the upcoming years.

However, some of the disadvantages of urban air mobility include its high initial investment cost. Urban air mobility is a flying vehicle that is developed to operate both on road and air but it requires to create of a suitable infrastructure for operating these vehicles in urban cities mostly in densely populated cities which includes a high investment cost in developing suitable infrastructure as well as there is chances of increase in noise pollution as these vehicles are

using rotary blades for flying. These factors are going to hamper the urban air mobility(UAM) market growth in the forecasted period.

The use of urban air mobility vehicles as air taxis is anticipated to gain traction. This is because urban air mobility is flying vehicles that are used for transportation of either passenger or goods from one destination to another destination within urban areas. These vehicles are having the capabilities to take off and land vertically this ability of urban air mobility vehicles is going to make these vehicles perfect for air taxis in urban areas. Also, these vehicles are using electric energy for running it makes it a cost-effective and pollution-free mode of urban transportation. For instance, the Volocopter the urban air mobility company has plans to introduce air taxis in Singapore in 2024.

The global urban air mobility market share is segmented based on platform, platform operations, range, platform architecture, and region. By platform, it is classified into air taxis, air shuttles & air metro, personal air vehicles, cargo air vehicles, air ambulance & medical emergency vehicles, and last-mile delivery vehicles. By platform operations piloted and autonomous. By range intercity and intracity. By platform architecture rotary wing and fixed-wing hybrid. By region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

The key players profiled in the urban air mobility market report include market players are Ehang, Lilium GmbH, Airbus, Wisk Aero LLC., Bell Textron, Volocopter GmbH, Workhorse Group Inc., Joby Aviation., Kitty Hawk, and Archer Aviation.

The report offers a comprehensive analysis of the global urban air mobility market trends by thoroughly studying different aspects of the market including major segments, market statistics, market dynamics, regional market outlook, investment opportunities, and top players working towards the growth of the market. The report also sheds light on the present urban air mobility(UAM) market trends, scenarios, and developments that are contributing to the growth of the market. Moreover, restraints and challenges that hold power to obstruct the market growth are also profiled in the report along with Porter's five forces analysis of the market to elucidate factors such as competitive landscape, bargaining power of buyers and suppliers, threats of new players, and the emergence of substitutes in the market.

Key Findings of the Study

Based on the platform, the air taxis sub-segment emerged as the global leader in 2021, and the last-mile delivery vehicles sub-segment is anticipated to be the fastest growing sub-segment during the forecast period.

Based on platform operations, the piloted sub-segment emerged as the global leader in 2021

and the autonomous sub-segment is anticipated to be the fastest growing sub-segment during the forecast period.

Based on range, the intercity sub-segment emerged as the global leader in 2021 and the intracity sub-segment is predicted to show the fastest growth in the upcoming years.

Based on platform architecture, the rotary wing sub-segment emerged as the global leader in 2021 and the fixed-wing hybrid sub-segment is predicted to show the fastest growth in the upcoming years.

Based on region, the Asia-Pacific market registered the highest market share in 2021 and is projected to maintain the position during the forecast period.

The report provides an in-depth analysis of urban air mobility(UAM) market share.

Reasons to Buy this Urban Air Mobility(UAM) Market Report:

- > Mergers and acquisitions should be well-planned by identifying the best manufacturer.
- > Sort new clients or possible partners into the demographic you're looking for.
- > Suitable for providing dependable and high-quality data and analysis to assist your internal and external presentations.
- > Develop tactical initiatives by gaining a better grasp of the areas in which huge corporations can intervene.
- > To increase and grow business potential and reach, develop and plan licencing and licencing strategies by finding possible partners with the most appealing projects.
- > Recognize newcomers with potentially strong product portfolios and devise effective counter-strategies to acquire a competitive edge.
- > To develop effective R&D strategies, gather information, analysis, and strategic insight from competitors
