Definition:

Dehumidifier and a re-generator are two major units in the liquid desiccant dehumidification system. In dehumidifier, strong liquid desiccant absorbs moisture so as to dehumidify the hot and humid process air due to the difference in the water vapour pressure between the air and the desiccant surface. Moreover, it is the technology which has been in use long time ago for both industrial as well as agricultural purposes including humidity control in textile mill and post-harvest crop drying in stores.

Market Trends:

- Development of Advanced Dehumidifiers that Automatically Calculate Humidity Level and Set the Functioning

Market Drivers:

- Increasing Awareness Among the Consumers Towards the Health
- Technological Developments Based on Energy-Efficient Dehumidifiers
