This type of technology is the process of studying extremely small things; it is a technology conducted at the nanoscale, which is about 1 to 100 nanometres. The use of nanotechnology in aerospace is called aerospace nanotechnology. This type of aerospace technology is used to create sensors in aircraft. Sensors in aircraft are the most crucial part of examining the performance of various parts of engines. Hence, a larger number of smaller sensors helps monitor various parameters in an aircraft.
