Continuous glucose monitoring (CGM) devices are medical devices used by individuals with diabetes to monitor their blood glucose levels continuously throughout the day and night. These devices provide real-time glucose readings, allowing users to track their glucose levels and make informed decisions regarding their diabetes management. CGM systems consist of three main components: a small sensor, a transmitter, and a receiver or smartphone app. The sensor is typically inserted under the skin, usually on the abdomen or arm, and measures glucose levels in the interstitial fluid. The transmitter is connected to the sensor and wirelessly sends the glucose data to the receiver or smartphone app.

China Continuous Glucose Monitoring Devices Market

The China Continuous Glucose Monitoring Devices Market size is estimated to be valued at US\$ 78.2 Million in 2022 and is expected to exhibit a CAGR of 22.8% over the forecast period (2023–2030).
