The main technologies involved in this type of modulation are internal and external (non-invasive). Internal involves implanting an electrode near a target nerve and delivering a low-voltage electric current through it. The biomaterials include polymeric biomaterial, metallic biomaterial, and ceramic biomaterial that are used for treating chronic pain, urinary and fecal incontinence, migraine, failed back syndrome, Parkinson's disease, epilepsy, tremor, depression, and others by various end-users including hospitals, clinics, and home healthcare.
