

Reimagining Travel Comfort : Exploring the Rise of Airport Sleeping Pods

OREGAON, PORTLAND, UNITED STATES , June 22, 2023 /EINPresswire.com/ -- Passengers use the [airport sleeping pods Market](#) to relax between aircraft. Passengers may generally be split into several groups: those who arrive, those who leave, and those who move from one place to another. In terms of the usage of airport infrastructure and facilities, the needs of these passengers differ. Airport facilities that can meet the needs of travelers, such as getting a fast nap, spa, and massage services, and free shower facilities offer a fun and enhanced airport experience. Passengers traveling with families want children's play areas where children can spend time before boarding. Besides, business passengers might want a sleeping cabin with some of the facilities they can work in.

Airport Sleeping Pods Market

The growing aviation industry has allowed airlines to expand the connectivity between locations, resulting in increased air travelers, increased transit flights & frequency, and adding new routes, around the globe which are key factors driving the growth during the forecast period. Moreover, growing demand by air travelers for advanced services at airports is resulting in rising demand for airport sleeping pods. Increasing product innovation to raise the standard of passenger services worldwide is a significant factor expected to fuel global market growth. Furthermore, rising demand for waiting rooms and increasing numbers of capsule hotels at the airport due to increased air passenger traffic worldwide are other factors that are expected to proliferate growth. However, major factors that hinder global market growth include the high cost of product and maintenance and stringent rules towards the protection of electrical components at the airport.

The new sleeping pod prototype for economic-class travelers is unveiled by Air New Zealand in 2020. Economy Skynest is a culmination of three years of research and development by Air New

Zealand, which provides six full-length lie-flat sleeping pods. Also, the first airport capsule hotel in Taiwan has now opened its doors to passengers traveling by Taoyuan International Airport in December 2019, and they can enjoy a quick sleep at the airport. Also, Istanbul Airport has 25 sleeping pods installed in January 2020 for passengers that want to rest before, after, or between flights. Also, a brand-new Plaza Premium Lounge that opened at Terminal 3 in 2020 can be checked out by travelers who fly from Dubai with Emirates. It provides 10-square-meter individual suites for families, groups of travelers seeking privacy. The pay-to-use lounge at Dubai International Airport is 1,260 meters long and is the biggest.

In developing and less-developed countries, the development of airport sleeping pods is estimated to create additional opportunities for growth in the global sleeping pods markets. The growing concept of aerotropolis along with the evolving lifestyle of airline passengers is another important driver for the growth of the global airport market in sleeping pods. For example, the International Airport Charlotte Douglas has put in sleeping pods with a sofa bed, Tv, computer, and a shower for those who would like to have a nap at home. JetBlue also revealed JetNap power pods in JFK New York City Airport terminal that looks like a future-oriented leaning chair, which plays music, provides relaxation, and reduces distractions.
