

# SmartFaucets; Investing In The Future of Water Conservation

IRVINE, CALIFORNIA, UNITED STATES,  
June 26, 2023 /EINPresswire.com/ --  
Why are SmartFaucets so unique?

SMARTFAUCETS USES A PATENTED  
SMART TOUCHPAD TECHNOLOGY  
WITH PRESET TEMPERATURE & TIMER  
THAT FURTHER INCREASES  
SANITATION, CONVENIENCE, AND  
WATER CONSERVATION

With concerns of future Pandemics  
and Worldwide shortage of clean  
drinking water, Touchless Auto Shut off  
faucets will soon be in demand and  
eventually a daily necessity.

1. Patented Preset Touch Temperature  
and Timer control-  
SmartFaucets combines the motion  
sensor with a Patented Smart  
Touchpad with preset temperature and  
timer for further sanitation and  
convenience while saving even more  
water.

A lot of water is wasted adjusting that  
temperature.

With US flow rate of 1 gallon per  
minute, Auto Shut off means 1 gallon  
of water saved while brushing your  
teeth , twice a day means 2 gallons of  
precious water saved plus  
miscellaneous savings means 1000

gallons saved per person per year. This means 1 billion gallons saved per million population.

## 2. Reliability & Durability-

Lab Tested 30 years without Failure (if used 50 times a day)

Unlike the current motion sensor faucets in public restrooms that often fail, SmartFaucets have been lab tested by IAPMO for 55,0000 uses without failure including its unique rechargeable battery which means never having to change batteries again.

This means 30 years lifespan if used 50 times a day.

Hence SmartFaucets is the only faucet that qualifies for pace a government backed financing for green innovation which means owners can install SmartFaucets with Zero money out of pocket while saving water gas electric paper towels and trash. SmartFaucets can be more Economical and Sanitary than Manual faucets in the long run.

SmartFaucets can help save billions and trillions of gallons of water on our planet and reduces trash water into the ocean saving ocean lives.

SmartFaucets are a necessity in current and future droughts and pandemics.
