

Market Analysis: Coated Abrasive Market, Microporous & Mesoporous Materials Market, Shampoo Zinc Pyrithione Market till 2030

Industry Analysis and market Trends: Coated Abrasive market, Microporous and Mesoporous Materials market and Shampoo Zinc Pyrithione Market for 2023-2030

SEATTLE, WASHINGTON, USA, June 29, 2023 /EINPresswire.com/ -- The Coated Abrasive Market is expected to grow from USD 3.20 Billion in 2022 to USD 3.80 Billion by 2030, at a CAGR of 2.60% during the forecast period. The increasing demand for coated abrasives from the metal and automotive industries is driving market growth.

Coated abrasive is a type of abrasive material bonded onto a coated backing, which is then used for grinding, polishing, and other metalworking applications. These backings come in various types, with the most common being paper and cloth. Paper backings are generally cheaper and more durable than cloth backings, making them ideal for projects that don't require as much precision. Cloth backings, on the other hand, are more precise and have a higher-quality finish than paper backings.

Other types of coated abrasive backings include film backings and foam backings. Film backings are thin, flexible, and durable, and are often used in precision grinding applications. Foam backings are more versatile than other types of backings, as they can be shaped to fit any curved surface. They are ideal for polishing and finishing applications.

Coated Abrasive is primarily used for grinding, sanding, polishing, and finishing surfaces across various industries such as metalworking, woodworking, furniture and musical instruments, automotive, and others. In metalworking, coated abrasive is widely used for deburring, edge grinding, and polishing applications.

Asia Pacific is expected to dominate the Coated Abrasive market, with a market share percent valuation of around 40% by 2025.

North America and Europe are also expected to witness significant growth in the Coated Abrasive market, with market share percent valuations of around 25% and 20%, respectively, by 2025.

Latin America and the Middle East and Africa are also expected to witness steady growth in the

Coated Abrasive market, with market share percent valuations of around 10% and 5%, respectively, by 2025.

Some of the leading companies in the market are :

- Saint-Gobain,
- KLINGSPOR,
- 3M,
- Hermes Schleifmittel,
- KWH Group,
- Sia Abrasives,
- Tyrolit,
- Pferd,
- Rhodius,
- Luxin High-tech,
- Fengmang Group,
- Hubei Yuli,
- Changzhou Kingcattle,
- Dongguan Golden Sun,
- Mipox.

In terms of sales revenue:

- Saint-Gobain generated a revenue of \$42.4 billion in 2020,
- 3M generated \$32.1 billion in the same year.
- KLINGSPOR's revenue figures are not available publicly.

The Microporous and Mesoporous Materials Market is expected to grow from USD 8.80 Billion in 2022 to USD 15.10 Billion by 2030, at a CAGR of 7.91% during the forecast period. Microporous materials refer to materials with pore sizes less than 2 nm, while mesoporous materials refer to materials with pore sizes between 2-50 nm. Microporous materials include zeolites, metal-organic frameworks (MOFs), and activated carbon, while mesoporous materials include MCM-41 and SBA-15. Microporous materials are used in applications such as gas separation, catalysis, and ion exchange, while mesoporous materials are used in applications such as drug delivery, chemical sensors, and catalysis.

Microporous and mesoporous materials are widely used in various applications such as refining and petrochemicals, water treatment, air purification, mercury control, agriculture and aquaculture, food & beverages, industrial processes, medical & pharmaceuticals, and others. In refining and petrochemicals, these materials are used as catalyst support for chemical reactions. In water treatment, they are used for filtration and adsorption of organic and inorganic

pollutants. In air purification, they effectively remove harmful gases and pollutants. In agriculture and aquaculture, they are used for soil and water conditioning. In the food and beverage industry.

The expected market share of the Microporous and Mesoporous Materials market in different regions is as follows:

- Asia Pacific: 38%
- North America: 34%
- Europe: 22%
- Rest of the World: 6%

The key players in the market include:

- Kuraray,
- BASF,
- Cabot Norit,
- Jacobi Carbons,
- Ingevity Corporation,
- Dow Corning,
- Wacker Chemicals,
- Shin-Etsu,
- Momentive Performance Materials,
- Honeywell International Inc

The sales revenue figures of a few of the above-listed companies are as follows:

- - Ingevity Corporation: \$1.23 billion (2020)
- - Kuraray: ¥445.32 billion (2020)
- - BASF: €59.15 billion (2020)

The global Shampoo Zinc Pyrithione market size is projected to grow from \$99.80 million in 2022 to \$118.70 million by 2030, at a CAGR of 2.51% during the forecast period. The increasing demand for anti-dandruff shampoos coupled with rising awareness about personal hygiene is driving the growth of the Shampoo Zinc Pyrithione market.

There are different types of Shampoo Zinc Pyrithione available in the market, which differ in their concentration of zinc pyrithione. The most common types of Shampoo Zinc Pyrithione are 50% emulsion and 48% emulsion.

The 50% emulsion type of Shampoo Zinc Pyrithione has a higher concentration of zinc pyrithione compared to the 48% emulsion type. This makes it more effective in treating severe dandruff

and scalp conditions. On the other hand, the 48% emulsion type of Shampoo Zinc Pyrithione is gentler on the scalp and is suitable for people with mild to moderate dandruff.

Shampoo Zinc Pyrithione is mainly used in the formulation of anti-dandruff shampoos due to its antifungal and antibacterial properties. It is also used as an active ingredient in the cosmetic industry for products such as lotions and creams. In the coating industry, it is used as a biocide to prevent the growth of microorganisms and preserve the product. Apart from these, it is also used in other applications such as plastic, textile, and rubber industries.

North America is expected to dominate the Shampoo Zinc Pyrithione market with a market share of around 35% by the end of 2025. This dominance can mainly be attributed to the high demand for anti-dandruff shampoo products in the region due to a high prevalence of scalp-related issues, such as dandruff and psoriasis.

Europe is also expected to have a significant market share of around 30% by the end of 2025. Asia-Pacific is expected to witness the fastest growth in the market, with an estimated CAGR of over 6% during the forecast period.

Shampoo Zinc Pyrithione market is highly competitive with various players operating in the market as follows:

- Lonza,
- Regen Chem,
- Kumar Organic,
- Vivimed (Clariant),
- Minghong Fine Chem,
- Kolon Life Science,
- Chugoku Kogyo,
- Tinci,
- Liyuan Chem.

The sales revenue figures of some of the companies operating in the market are as follows:

- Vivimed (Clariant) reported revenue of \$208.5 million in 2020.
- Lonza reported revenue of \$4.5 billion in 2020.
- Regen Chem reported revenue of \$725 million in 2020.
