J2 Software partners with IMechE to enhance email security with Mimecast Services

UNITED KINGDOM, July 3, 2023 /EINPresswire.com/ -- J2 Software, a leading provider of cyber security solutions, proudly announces its partnership with the Institution of Mechanical Engineers (IMechE), a non-profit organisation, to strengthen their email security posture. The collaboration has resulted in significant improvements in the IMechE's email security through the implementation of Mimecast services.

According to IMechE CTO Jake Fraser, the challenges they faced before partnering with J2 Software included an "outdated, basic email security solution" that left them vulnerable to multiple threats per week. They lacked protection against common threat vectors such as impersonation, insider threats, outbound checks, malicious URLs, and attachment security beyond basic checks.

J2 Software CEO John Mc Loughlin

The implementation of Mimecast services by J2 Software has provided the IMechE with a "vastly superior email security" solution. Fraser acknowledges the value of this partnership, stating, "With their Mimecast services, we now have a vastly superior email security solution that has reduced the risk of cyberattacks."

J2 Software's practical approach and advisory services have been instrumental in improving the IMechE's security posture. Fraser appreciates their consultative nature, noting that J2 Software provides "tons of helpful and pragmatic recommendations on how to improve things.

The team at J2 Software understands the challenges faced by the IMechE as a non-profit organisation and offers cost-effective suggestions that genuinely enhance their security

posture."

The features of Mimecast services, such as high configurability and insights derived from thousands of customers, have appealed to the IMechE. Fraser emphasises the benefits of having J2 Software's advice and support readily available, stating, "The Mimecast service is highly configurable, so having J2's advice and support available whenever we need to check things is very helpful."

J2 Software's consultative and supportive service has been integral to the partnership's success. Fraser highlights their understanding of the IMechE's challenges and their prompt guidance, stating, "They are very understanding of our challenges and provide guidance whenever we need it. Their support team understands that often we need to work with a vendor, and they own those requests through to a resolution without prompting."

IMechE CTO Jake Fraser

Looking ahead, the IMechE foresees future projects with J2 Software, including network security, remote access, and moving towards zero-trust (ZTNA) architecture. They also plan to utilise J2 Software's team of experts for technology estate hardening as they update their infrastructure.

"

The challenges IMechE faced before partnering with J2 Software included an "outdated, basic email security solution" that left them vulnerable to multiple threats per week."
IMechE CTO Jake Fraser

John Mc Loughlin, CEO of J2 Software, reiterates their commitment to unlocking value for the IMechE and improving their cybersecurity posture. He affirms their proven approach, stating, "Our proven approach of getting things done has resulted in significant time savings and improved security for the IMechE."

The successful implementation of Mimecast services resulting from the partnership between J2 Software and the Institution of Mechanical Engineers has substantially enhanced the IMechE's email security posture.

This collaboration demonstrates the importance of collaboration between cyber security

solution providers and non-profit organisations in fortifying security and reducing the risk of cyberattacks.

More about J2 Software (https://j2software.co.uk/)

J2 Software is a cyber security focused technology business founded in 2006 to address the need for effective cybersecurity, governance, risk and compliance solutions that are practical and purpose built.

The continued rise of cybercrime, identity theft and confidential data leakage drives the requirement for J2 Software's managed cyber security service offerings, not only for competitive advantage, but as an absolute business necessity. The company offers managed cyber security services for every business. We ensure that you have greater visibility to identify risky behaviour and enhance the capability to respond to prevent losses.

J2 Software delivers essential tools that empower organisations to take control of their technology spend. The company's hand-picked solutions are combined with our services to provide complete visibility over its customers' environment, while reducing risk and lowering costs.

J2 Software is helping improve the cyber resilience of our customers and provide services to more than 350 customers on 4 continents.
