Trending Modular and Prefabricated Nonresidential Building Construction Market Trend

Cross-laminated timber (CLT) is one of the promising technologies in the timber construction segment of the wood industry. The demand for CLT is increasing in non-residential building construction, such as schools, restaurants, stores, and warehouses, which is used as an alternative to steel and concrete because wood is evolving as a low-cost alternative. In the construction industry, 3D printing can be used to create construction components or to print entire buildings. 3D printing construction is majorly used for building complex components for private, commercial, and industrial construction. It provides advantages such as low labor costs, faster construction, and higher accuracy. The DFAB House is the world's first inhabited house that was both digitally planned and built.
