

EDRM Announces Cloud Court as Newest Trusted Partner

MINNEAPOLIS, MN, USA, July 11, 2023 /EINPresswire.com/ -- Setting the global standards for e-discovery, the Electronic Discovery Reference Model (EDRM) is pleased to announce Cloud Court, Inc. ("Cloud Court") the developer of a revolutionary Testimony Intelligence SaaS tool that is mining and analyzing testimony to improve outcomes has joined the EDRM Trusted Partner Network.

Privacy and security enabled

eDiscovery technology and services will play a central role in organizations as they strive to keep their data secure. Robust e-discovery technology, supported by expertise and services, helps organizations respond to litigation, compliance and investigation demands. In a new era of

hybrid and remote work at scale, organizations need to securely manage information, protect confidential and privileged access and collaborate effectively to be efficient and productive and adhere to the increasing complex demands of security and data privacy frameworks.

“

For hundreds of years, if you wanted to know what happened in a deposition you didn't attend, you needed to spend hours reading it. Or read an imperfect synopsis from someone who did.”

Norman Taple, founder and chairman at Cloud Court.

To make it easy and simple for attorneys and paralegals to instantly find relevant testimony, [Cloud Court's AI, Gibson](#), delivers content organized by topic, witness type and alignment, file, and numerous other indices. The UI can be configured. The trial team can instantly have a global or granular view to compare and contrast testimony, export testimony across witnesses by topic, observe patterns in

attorney and witness behavior, and select or prepare witnesses more effectively.

“For hundreds of years, if you wanted to know what happened in a deposition you didn't attend, you needed to spend hours reading it. Or read an imperfect synopsis from someone who did,” said Norman Taple, founder and chairman at Cloud Court. “And yet, what was said needs to be

shared with the entire team. Gibson helps teams cross-pollinate testimony knowledge very efficiently, then helps them mine that testimony for actionable information.”

Among the EDRM opportunities and resources available to partners like Cloud Court are the ability to connect, network and contribute via EDRM projects and events, share their service and product offerings and enhance brand awareness to a global

community. The EDRM community of knowledgeable, multidisciplinary professionals is building resources to enhance e-discovery, privacy, security and information governance frameworks, processes and standards.

“Cloud Court is a hot seat operator’s impeachment machine,” explained Mary Mack, CEO and chief legal technologist for EDRM. “EDRM is proud to partner with Cloud Court with their laser focus on making trial teams successful,” she added.

“Imagine what's possible if your entire team had a borderline omniscient view of all testimony,” said Michael D. Okerlund, founder and CEO at Cloud Court. “Would that help your team identify better evidence? Write more compelling motions? Undermine adverse experts? Empower your own witnesses? And stitch together the most powerful narrative the record can support? Of course. Gibson makes all this possible, and more.”

Dr. Milena Higgins, Cloud Court’s Chief Technology Officer and a physicist by training, is leading the charge in the emerging field of Testimony Intelligence. “Gibson is the first technology of its kind.” says Dr. Higgins. “Its AI-based analytics and its ability to visually depict testimony is a powerful combination. But we’re just getting started.”

This partnership allows Cloud Court access to the EDRM community, comprising 33% corporations, 30% law firms and 23% software and service providers, 12% governments with the remaining 2% being a mix of educators, students, judges and media in 145 countries spanning six continents.
