Research methodology

The estimation and validation of the UK household cleaners market size and various other dependent submarkets are provided using the top-down and bottom-up approaches.

Bottom-up Approach: The bottom-up approach is used to reach the overall market size of the UK household cleaners market by estimating the revenue generation and value of the market, through secondary and primary research.

Top-down Approach

The market size obtained from the bottom-up approach is applied in the top-down approach to estimate the size of other segments presented in the table of content through percentage splits from secondary and primary research. This overall market size is used in the top-down approach to estimate national consumption.

Data Triangulation: To triangulate the data derived from the market size estimation process explained above, the total market is split into other segments.

With this methodology, AMR triangulates the market size estimation and ensures that our

analysis is aligned with the industry situation.
