The aircraft nacelle and thrust reverser refer to the parts of an aircraft used for vital operations. An aircraft nacelle is a covering of an engine including a generator, low- and high-speed shafts, gearbox, brake, and control electronics. A thrust reverser is a vital component of many aircraft that enables faster landing deceleration and is a part of the nacelle system that assists the

aircraft in slowing down after touchdown by operating against the aircraft's forward motion helping in reducing brake wear for shorter landing distances.
