Definition:

A green roof is a vegetative layer grown on a rooftop of a building and it also recognized as roof gardens, these green roofs serve as a large contributor to the energy efficiency of buildings. Green roofs reduce the temperature of the building and the surrounding air in multiple ways like shading and evapotranspiration. While some roofs can reach temperatures of up to 90°F in the summertime, these two features can allow green roofs to actually be cooler than the surrounding air temperature. This, in turn, mitigates the urban heat island effect.

Market Trends:

- Increasing Trend of Urban Food Production

Market Drivers:

- Moderate the Urban Heat Island Effect
- Rising Concerns Regarding Air Pollution

Market Opportunities:

- Inclination towards Aesthetic Improvement of Building
- Growing Awareness of the Economic, Social and Environmental Benefits of Green Roofs

As Green Roofs research and application [Residential, Commercial, Industrial] continue to expand in scope, the market will see deeper integration and application of more technologies in the future.
