These types of air purifiers are used to minimize the presence of total volatile organic compounds, particulate matter, smoke, pollen grains, dust, harmful chemicals, gases, and other pollutants in the air. These types of air purifier is an upgraded version of a traditional air purifier that is incorporated with technology to provide pure, dust, and contaminate-free air. It is connected to wireless networks such as Wi-Fi and Bluetooth and can be remotely operated by using an app on smartphones to measure and monitor airborne particles in the surroundings and deliver real-time captured data. It is used for the purification of airborne toxins and particulate matter.
