

# Fully automated macOS & Windows endpoint management in a unified platform for more control & security

CHICAGO, ILLINOIS, UNITED STATES, July 12, 2023 /EINPresswire.com/ -- [Raynet](#), global software vendor with market-leading solutions and managed service provider in the field of Enterprise Software Management, announces today the release of RayManageSoft Unified Endpoint Manager (RayManageSoft UEM) 3.0. With the latest version, users gain fully automated third

“

This update allow users to manage all Windows and macOS devices and gives them powerful patching and packaging automations to keep their endpoints up to date, secure, lean and optimized.”

Products & Innovation at  
Raynet*

party and security patch management for better control, improved cybersecurity, and more efficiencies in managing their macOS and Windows endpoints in central, decentral, and hybrid environments.

Modern enterprises and organizations use a variety of tools and solutions to control and manage their IT assets regardless of vendor. IT administrators, CIOs, CSOs and endpoint managers want a solution that simplifies the management of all endpoints across devices while ensuring IT security and smooth workflows.

With the release of RayManageSoft UEM 3.0, users get a powerful solution that further automates third-party and

security patching, creates a unique user experience with valuable insights and analytics across any IT asset, and delivers greater daily efficiency across platforms.

RayManageSoft UEM facilitates parallel update & patch management of two work environments (Windows & macOS) and ensures security of data, devices and infrastructures through intelligent automations and patching routines. Faster patching and deployment processes ensure that users can work uninterrupted, and they provide significant relief for IT departments.

The fully integrated Package Store gives users access to more than 30,000 immediately available and deployable software packages, including for third-party software, ensuring that software vulnerabilities and security gaps can be patched on demand. RayManageSoft UEM is the only solution on the market that unifies IT security, scalability, and flexibility to provide seamless, end-to-end, and comprehensive modern Endpoint Management.

RayManageSoft UEM version 3.0 has additional updates and features, including:

The updates provide better infrastructure and data security, help prevent application sprawl, and streamline and optimize processes to make them user-friendlier and more efficient.

Windows & macOS: Unify two work environments in one central solution, and benefit from more security and control of all your endpoints.

Package Store: With immediately available & preconfigured macOS software packages, users can ensure their portfolio is always up to date and quickly eliminate any software vulnerabilities.

Third-Party Patch Management: Recognition & fully automated patch management, regardless of the system, e.g., Intune, that was originally used for deployment.

Asset Tagging: Assign endpoints individual tags (location, department, room, name, etc.) for more flexibility in policy configuration.

“This update is a leap forward for managing complex, hybrid environments. Not only does it allow users to manage all the Windows and macOS devices in their environments in one, unified platform, but it also gives them powerful patching and packaging automations that will keep them flexible and let their employees work, and keep their endpoints up to date, secure, and their software portfolios lean and optimized.”
