

BlueFletch and Ivanti Wavelink Deliver Industry-First SSO for Velocity's Industrial Browser and Terminal Emulation

ATLANTA, GA, UNITED STATES, July 12, 2023 /EINPresswire.com/ -- Innovative tech firms, BlueFletch and Ivanti Wavelink, the supply chain business unit of Ivanti, are proud to announce their groundbreaking collaboration offering the only Android Single Sign-On (SSO) solution specifically designed for Wavelink Velocity's Industrial Browser and Terminal Emulation on shared workforce devices.

By harnessing BlueFletch's expertise in Authentication, Security, and Log-in, along with their successful Enterprise Launcher for mobile device control, and combining it with Ivanti's Velocity platform to empower workforces with modern and effective business applications, this partnership enables users to log in once to access all their daily workplace apps, thus significantly simplifying operational processes.

“

BlueFletch's partnership with Ivanti eliminates the daily hassles related to multiple logins, forgotten passwords, and system resets. Our combined solution is a game-changer for the industry.”

Richard Makerson, CEO of BlueFletch

“BlueFletch's mission has always been about streamlining processes and enhancing productivity,” says Richard Makerson, CEO of BlueFletch. “This partnership with Ivanti furthers that mission, eliminating the daily hassles related to multiple logins, forgotten passwords, and system resets. Our combined solution is a game-changer for the

industry.”

Previously, workers had to individually log in to every system or application they engaged with throughout their workday. This inefficient process didn't just impede productivity but also caused issues around remembering a variety of passwords or having to reset forgotten ones across different systems.

Brandon Black, Senior Vice President and General Manager of Ivanti Wavelink adds, “At Ivanti Wavelink, we focus on enabling supply chain employees with optimized and intuitive business

applications. Teaming up with BlueFletch allows us to take this to a whole new level. Now, users need to log in just once at the start of their shift, and their credentials seamlessly follow them across their apps. This is a great leap forward for enhancing worker productivity and accuracy."
