Remote Browser Isolation Market Report

- Remote Browser Isolation Market Channel Segment (Direct Sales, Distribution Channel)
- Section 1: USD Million —Remote Browser Isolation Industry Forecast (2023-2028)
- Section 2: USD Million —Downstream Customers
- Section 3: USD Million —Raw Material and Manufacturing Cost
- Section 4: USD Million —Conclusion
- Section 5: Research Method and Data Source.

Remote Browser Isolation

Browser isolation is a virtualization technique that moves browser execution from the user device to a secure environment -- either locally on the user device or remotely in the cloud (Remote Browser Isolation (RBI)). In this way, browser activity is isolated from the user, preventing any attempts at malware infection through web-based attacks. Browser isolation takes a completely different approach to Web security than traditional network security solutions. Typically, security solutions require a list of known attacks and suspicious activity in order to identify threatening Web content and block access to it. Web quarantine technology protects any Web content within a remote endpoint, sanitizes it, and sends the secure content to the user's local browser. As a result, users can access content while being protected, even from zero-day attacks. This security technique is particularly useful for protecting employees who work with highly sensitive data, such as government, medical, banking or military records.

To provide a comprehensive understanding of the industry's competitive landscape, we analyze not only the prominent global players but also the significant regional small and medium-sized companies that play critical roles and have substantial growth potential.

- Broadcom
- Cisco
- Cloudflare
- ConnX
- Ericom
- Forcepoint
- McAfee
- Proofpoint
- Versa Networks
- Zscaler
- Netskope
- Check Point
- Menlo Security
- Hysolate
- Tistarsec

Since the outbreak of COVID-19, the world economy continues to suffer from many destructive risks, many companies have experienced bankruptcy and a reduction in exchange rates. After

more than two years of the epidemic, the world economy has begun to recover, entering 2023, the invasion of Ukraine by the Russian Federation and its global impact on commodity markets, supply chains, prices and The financial situation has led to the decline of international. taste. In particular, the war in Ukraine is causing prices to rise and disruptions in the energy market, working better for energy exporters than being pushed head-to-head to work and many other economies. The invasion of Ukraine has also caused the price of agricultural products to increase, which increases food insecurity and extreme poverty in many emerging and developing countries.
