Definition:

Chafing fuel is a fuel used for heating food, typically placed under a chafing dish. It is usually sold in a small canister and burned directly within that canister, with or without a wick. The raw materials of this fuel contain methanol, ethanol, or diethylene glycol, as these may be burned safely indoors, and produce minimal soot or odor. These fuels are also used for emergency

heating, outdoor cooking, and fondue. Presently, consumers are more inclined toward tourism, camping, and picnics. This has raised the demand for portable energy storage devices utilized for food heating purposes.

Market Trends:

- Huge investment in research and development

Market Drivers:

- Growing number of restaurants serving food in chafing dishes
- Highly portable nature and light weight

Market Opportunities:

- Increasing demand for activities such as camping, picnics, and other outdoor activities propelling the demand for warm and hygienic food

Chafing Fuel

Revenue and Sales Estimation — Historical Revenue and sales volume are presented and further data is triangulated with top-down and bottom-up approaches to forecast complete market size and to estimate forecast numbers for key regions covered in the report along with classified and well-recognized Types and end-use industry.

SWOT Analysis on Chafing Fuel Players

In addition to Market Share analysis of players, in-depth profiling, product/service, and business overview, the study also concentrates on BCG matrix, heat map analysis, FPNV positioning along with SWOT analysis to better correlate market competitiveness.

Demand from top-notch companies and government agencies is expected to rise as they seek more information on the latest scenario. Check the Demand Determinants section for more information.

Regulation Analysis

- Local System and Other Regulation: Regional variations in Laws for the use of Chafing Fuel
- Regulation and its Implications
- Other Compliances
