Placenta is the vascular organ in most mammals that connects the fetus to the uterus of the mother. It mediates the metabolic exchanges of the developing individual through an intimate association of embryonic tissues and of specific uterine tissues, which serve the functions of respiration, nutrition, and excretion. Placentas are also used as a source of extracts for ingredients in various consumer products.

According to our latest study, the global Placenta market size was valued at USD 76 million in 2022 and is forecast to a readjusted size of USD 124.5 million by 2029 with a CAGR of 7.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Japan is the largest consumption place, with a consumption market share nearly 36%. Following Japan, Europe is the second largest consumption place with the consumption market share of 15%.
