Smart Speaker Market Detailed Analysis

A smart speaker is a type of loudspeaker and voice command device with an integrated virtual assistant that offers interactive actions and hands-free activation with the help of one "hot word" (or several "hot words"). Some smart speakers can also act as a smart device that utilizes Wi-Fi, Bluetooth and other protocol standards to extend usage beyond audio playback, such as to control home automation devices. This can include, but is not limited to, features such as compatibility across a number of services and platforms, peer-to-peer connection through mesh networking, virtual assistants, and others. Each can have its own designated interface and features in-house, usually launched or controlled via application or home automation software.

Some smart speakers also include a screen to show the user a visual response.

A smart speaker with a touchscreen is known as a smart display. It is a smart Bluetooth device that integrates conversational user interface with display screens to augment voice interaction with images and video. They are powered by one of the common voice assistants and offer controls for smart home devices, feature streaming apps and web browsers with touch controls for selecting content.

The global Smart Speaker market was valued at USD 10970 million in 2022 and is anticipated to reach USD 17090 million by 2029, witnessing a CAGR of 6.4 percent during the forecast period 2023-2029. The influence of COVID-19 and the Netherlands-Ukraine War were considered while estimating market sizes.
