Reduction in IT infrastructure visibility, surge in configuration errors in cloud infrastructure, lack of efficient security tools & processes to manage cloud-based environments, and integration of DevSecOps and threat intelligence to boost global cloud security posture management market growth. The surge in internet penetration and increase in adoption of cloud technology by various verticals such as BFSI and manufacturing during the COVID-19 favorably impacted the growth of the global market.

The report offers detailed segmentation of the global cloud security posture management market based on offering, cloud service model, enterprise size, industry vertical, and region. The report provides a comprehensive analysis of every segment and their respective sub-segment with the help of graphical and tabular representation. This analysis can essentially help market players, investors, and new entrants in determining and devising strategies based on fastest growing segments and highest revenue generation that is mentioned in the report.

Covid-19 Scenario:

□ The outbreak of COVID-19 has had a positive impact on the growth of the global cloud security posture management market, owing to the occurrence of lockdowns in various countries across the globe.

□ Stringent social distancing restrictions were imposed by the government so as to curb the spread of the virus during the pandemic.

□ Lockdowns resulted in the increased internet penetration among people as more and more jobs were switched to work from home procedures. Thus, there was an increased need for cloud security, which positively impacted the growth of the market.

□ In addition, advancements in cloud security capabilities are expected to create ample opportunities for the industry.
