

Construction and Infrastructure in Saudi Arabia: A Vision for 2030

JEDDAH, KINGDOM OF SAUDI ARABIA, July 31, 2023 /EINPresswire.com/ --

The Kingdom of Saudi Arabia is experiencing a rapid pace of construction and infrastructure development, driven by the ambitious Vision 2030. This vision aims to diversify the economy and create a sustainable, modern society. The construction sector is a key pillar of this vision, with significant investments in infrastructure, housing, and public facilities. The government has set a target to increase the construction sector's contribution to the GDP to 10% by 2030. This target is supported by a series of initiatives, including the launch of the National Construction Authority (NCA) and the implementation of the Saudi Building Code (SBC). The NCA is responsible for regulating the construction industry and ensuring the quality and safety of buildings. The SBC is a comprehensive set of standards that covers all aspects of building construction, from design and materials to construction methods and safety. The implementation of the SBC is expected to lead to a significant improvement in the quality and safety of buildings in Saudi Arabia. In addition to the SBC, the government has also launched several other initiatives to support the construction sector. These include the launch of the Saudi Construction Industry Council (SCIC) and the implementation of the Saudi Construction Industry Code (SCIC). The SCIC is a professional body that represents the interests of construction professionals and promotes the highest standards of practice. The SCIC is also responsible for the regulation of construction professionals and the issuance of licenses. The implementation of the SCIC is expected to lead to a significant improvement in the professionalism and standards of the construction industry in Saudi Arabia. Overall, the construction and infrastructure sector in Saudi Arabia is expected to play a vital role in the realization of Vision 2030. The government's commitment to investing in this sector, along with the implementation of the SBC and the SCIC, is expected to lead to a significant increase in the sector's contribution to the GDP and the creation of a modern, sustainable society.
