Elastos Taps Wisdom Labs as Premiere Building Partner for Gaming & Esports

Partnership Looks to Foster Web3 Game Development Through Elastos Platform

LONDON, UNITED KINGDOM, August 1, 2023 /EINPresswire.com/ -- Elastos, a decentralized Web3 ecosystem, and Wisdom Labs, the development and Web3 division of Wisdom Gaming, today announced a partnership that will see Wisdom Labs become a premiere building partner for gaming and esports for projects and platforms in Elastos' decentralized ecosystem.

The Elastos and Wisdom Labs partnership offers new opportunities for gamers, producers, and platforms to build, own and monetize content

Wisdom Labs will become a leading building partner for game creators looking to build or deploy on Elastos through this collaboration. Elastos' existing and future gaming partners will have access to work directly with Wisdom Labs, tapping into the team's expertise in design, development, broadcasting, and community building in addition to identifying new areas to level up partnerships, offering the Web3 gaming community opportunities to build upon data, content, and experiences.
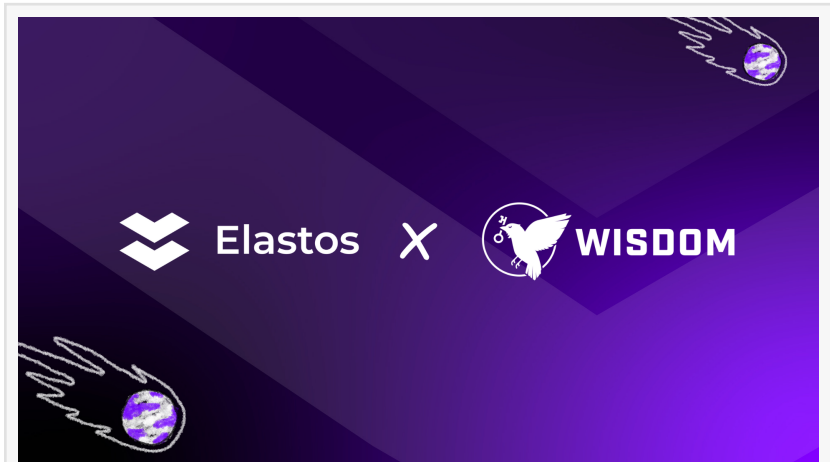

> " As gamers, we're excited to develop a healthy and collaborative decentralized gaming ecosystem that allows users to own, track and monetize their efforts while having a blast."
>
> *Fakhul Miah, Elastos Growth Lead*

"GameFi has been at the forefront of what Web3 can deliver in terms of building economies around communities," says Fakhul Miah, Growth Lead at Elastos. "As gamers, we're excited to develop a healthy and collaborative decentralized gaming ecosystem that allows users to own, track and monetize their efforts while having a blast. As a top gaming and esports development team based in the US, Wisdom Labs brings experience and excitement to Elastos, and we look forward to working together to build the next generation of experiences for users."

The partnership offers exciting new opportunities for gamers, producers, and platforms to own

and monetize content. As a dynamic building partner for gaming and esports, Wisdom Labs will support Elastos' new and existing partners to further develop their Web3 game development through the application of Elastos decentralized technologies such as identifiers (DID), storage (Hive), and digital rights management (DRM). Supporting the next generation of game developers, both teams look to eventually include learn-to-earn opportunities for new developers to apply Web3 principles.

"The ability to build on multiple blockchains offers tremendous value for Web3 game developers, allowing them to not conform to only one standard," said Adin Zweigbaum, Web3 Project Lead at Wisdom Labs. "We're thrilled to extend our expertise into Elastos' new and current partners to bridge the game between creative builders seeking to create somewhere new and providing them the required support to get there."

The partnership announcement caps a string of recent partnerships between Elastos and GameFi developers and platforms that look to incorporate Elastos' decentralized solutions.

ABOUT WISDOM LABS

Wisdom Labs is Wisdom Gaming's Web3 development division that is creating products that will change how people experience gaming and esports. Wisdom Labs operates as both a creative agency and a development team utilizing innovative technology to take projects from ideation to development, all under one roof. Service offerings include Web3 integrations, smart contract development, security audits, token development, NFTs, blockchain-based mobile game development, DAPP development, and in-app purchase support. In addition to Web3 services, Wisdom Labs offers Web2 capabilities including full-stack development, UX/UI design, Twitch extensions, and e-commerce platform development. To check out all of our offerings and projects, please visit https://www.wisdom.gg/labs.

ABOUT ELASTOS

Elastos is a Web3 ecosystem powered by a suite of open-source, decentralized technologies for identity, security, communication, data storage, and commerce that give developers the hardware and software tools to build decentralized applications from games to social platforms, DeFi, and marketplaces.

As the only Web3 ecosystem with a blockchain dedicated to DIF and W3C compliant decentralized identities (DIDs), a unique, secure dual-chain architecture and a hybrid consensus, Elastos champions self-sovereignty, providing unlimited control, security, and interoperability as well as grants and guidance for those who wish to build a truly decentralized web and forge their digital destiny.
