Roof coatings are monolithic fluids that are applied to roofing membranes. Due to its elastic properties, it is able to stretch and restore its original shape. Roof coating is the initial layer of the surface, it is directly affected by sunlight infrared and ultraviolet, hail and other factors that may cause roof damage. Therefore, it is an excellent barrier to direct radiation and other natural conditions. Roof coatings not only reduce and control room temperature but also keep the room warm during the winter. Roof coatings protect the surface from direct heat, reducing the chance of generating heat below the roof surface. This ultimately reduces the energy consumption and utilization of HVAC equipment.
