Amphibious Aircraft Market Size

An amphibious aircraft or seaplane is a type of aircraft that can take-off and land on solid surfaces and waterways. These aircraft are used for numerous civil & military applications. They are also known as seaplanes that can perform search-and-rescue operations, firefighting, patrolling in the maritime economic zone, environmental monitoring, military, special tasks, and cargo and passenger operations. Fixed-wing amphibious aircraft are seaplanes equipped with retractable wheels, at the expense of extra weight and complexity, plus diminished range and fuel economy compared to planes designed specifically for land-only or water-only operation. Some amphibians are fitted with reinforced keels which act as skis, allowing them to land on snow or ice with their wheels up.

Moreover, the market is witnessing suitable growth in recent years, owing to the increase in contracts and aircraft deliveries across the globe. Moreover, the key manufacturers operating in the industry have been inclined towards developing superior quality efficient amphibious aircraft which can be used in all conditions and can take-off & land in water as well as ice and land. For instance, in March 2020, Dornier Seawings developed the prototype SN1003, new generation of the Dornier Seastar amphibious aircraft successfully performed its first flight at Oberpfaffenhofen EDMO airport, Germany. The new generation Seastar is significantly improved from the original Seastar. Similarly, in April 2020, Norwegian start-up Equator Aircraft announced that it has developed a small family of all-electric amphibians to provide sustainable alternative

to the noisy and costly types serving the owner-flyer and commercial passenger transport markets. Such developments create a wider scope for the growth of the market across the globe.

Amphibious aircraft offers connectivity to areas that do not have landing runways. Launching the amphibious aircraft services will have a number of benefits such as boosting tourism. It will not only be an attractive option for tourists to try but will also help in generating employment opportunities in the region, which will consequently contribute to the country's GDP. Seaplane service will make the journey easier and save time by providing air connectivity to numerous remote, religious, tourist places and unexplored locations near the water bodies time. Several countries are boosting their country's tourism sector by developing seaplane services. For instance, in June 2021, The Ministry of Ports, Shipping and Waterways signed a memorandum of understanding (MoU) with the Ministry of Civil Aviation to develop seaplane services in India. The MoU will play a major role in boosting tourism and enhancing seamless connectivity across the country. The launch of the seaplane services in India will have a number of benefits such as boosting tourism, generating employment opportunities in the region, and making the seaplanes project a reality in the country. Thus, tourism will further increase the demand for the amphibious aircraft market.

By aircraft type, the fixed wing segment is projected to dominate the global market in terms of growth rate.

By engine type, the turboprop segment is projected to dominate the global amphibious aircraft market in terms of growth rate.

By end use, the general aviation segment is projected to dominate the global amphibious aircraft market in terms of growth rate.

By end use, the general aviation segment is projected to dominate the global market in terms of growth rate.
