The global Gum Rosin market size was valued at USD 2297.62 million in 2022 and is expected to expand at a CAGR of 3.0% during the forecast period, reaching USD 2744.03 million by 2028.

Rosin, also called colophony or Greek pitch (Latin: *pix græca*), is a solid form of resin obtained from pines and some other plants, mostly conifers, produced by heating fresh liquid resin to vaporize the volatile liquid terpene components. It is semi-transparent and varies in color from yellow to black. At room temperature rosin is brittle, but it melts at stove-top temperature. It chiefly consists of various resin acids, especially abietic acid. The term "colophony" comes from *colophonia resina*, Latin for "resin from Colophon," an ancient Ionic city.

It becomes sticky when warm and has a faint pinelike odour. Gum rosin consists of the residue obtained upon distillation of the oleoresin (a natural fluid) from pine trees (the volatile component is spirit of turpentine); wood rosin, obtained by solvent extraction of the stumps, is usually of a darker colour.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Gum Rosin market covering all its essential aspects.
