The emulsifiers act as a surfactant that stabilizes the emulsions. Emulsifiers also called emulgent, are surface-active agents that act at the interface between two immiscible liquids such as oil and water, allowing them to be blended into stable emulsions, by maintaining the stability of the mixture. Emulsifiers also reduce stickiness, control crystallization, and prevent separation and are present in ready-made sauces, mayonnaise, soups, and many other food products in which the combination of oil and aqueous phase is needed. They are also found in dairy products such as milk, cream, butter, cheese, yogurt, and various kinds of sweets, such as chocolate, chocolate bars, marshmallows.
